New football talents

Discover the new soccer talent Cameron Gascoigne. Newcastle United makes an offer to buy him. Get information on [page 11](#)

The day after the storm.

Heavy storm in France

More than 16 people were killed in France and thousands of homes were destroyed.
A sign for the global warming.

By Martin Ksoll (10 D) and Robin Hacker (10 A)

Last Saturday a storm had disastrous consequences for France. „Klaus“ is his name and he blew with 183 km/h over the north of Spain and the south-west of France. Million of people had no electricity, roofs and cars were damaged, trees were uprooted and airports in Bordeaux and Toulouse and railway stations were closed. But the worst consequence was that at least 16 people died.

A 61-year-old Parisian woman died when her car was crushed by a tree. A suburbanite was decapitated in the west of Paris by flying sheet metal. A 24-year-old man was killed by a falling tree as he rode his motorbike near Compiègne, in the north of Paris, and a 25-year-old woman was killed in Grunoy when a tree fell on her car.

Two men, one 53, the other 62, were killed in the Aisne region. A 78-year-old pensioner died because her respirator was defect because of the power cut. In Barcelona a roof of a sport hall collapsed and four children died who tried to hide there from the storm.

The roof of the control tower was blown away

13 children and two coaches were hurt. In other parts of Spain at least eight people became the victims of „Klaus“ because of collapsed walls and uprooted trees. In Bilbao a construction crane collapsed and two people died and on another building site a wall collapsed and fell on two construction workers. The airports in Bilbao, Pamplona, Santan-

der and San Sebastian were closed. The weather service compared the storm with a tornado and said that on Tuesday there will be a high wind speed, too.

At the railway station of La Rochelle the windows were destroyed and at the airport of Clermont-Ferrand the roof of the control tower was blown away. Many fallen trees obstructed the police and the fire brigade during their operation. Rescue workers in Paris closed the Saint-Chapelle monument because a stone angel on its roof risked being toppled by the guests.

Also the Eiffel Tower, parks in Paris and outdoor ice skating rinks were closed. The fallen trees blocked the roads so the important aquitaniens-bridge had to be closed. EDF had to release the emergency plan for the atomic power plant near Toulouse. They did everything to defend of a flood-

ing and all reactors are working good.

In the Pyrenees, winter sport facilities had to be closed. The storm moved over the south of France into the east and is approaching north-Italy. Traffic on the TGV fast train between Paris and Lille also was interrupted.

On Sunday afternoon there will be first connections in direction of Toulouse and Montpellier. But the railways in the south of Bordeaux have to be closed for a while until the rails are cleaned and have electricity again. The reconstruction of the electricity could take some days. The French weather service warns the inhabitants against heavy rain and flooding. The environmental authority of the UNO, Unep, and scientists think that such storms are a sign for the global warming. The Unep-leader Klaus Töpfer said that the humans have the blame.

Belgian man killed two children and one woman

By Sven Nagel and Desiree Lange, 10A

It was the worst beginning of a year that Belgium can remember. A psychopath apparently killed 4 children, several children are still in a critical condition. He was arrested by the police, while he was trying to escape by bicycle. Ten children are severely injured,

among them two adults. The 20-year-old man was put into prison!

He put white make up on his face so it looked like a mask and he packed two knives in his back pack. Then the tall man with the fire red hair cycled to the kindergarten in the little town of Dendermonde. It was 10 o'clock when he was knocking on the front door of

the "dreamland". He said that he had a question and so he got into the kindergarten. He was just one second inside when he attacked the little children in the dormitory. But he hadn't got enough! He ran into the rooms of the older children, too. The teacher of the kindergarten tried to hold him back but he stabbed her. The children who were able to walk

tried to run away. When he left the kindergarten 2 children and one teacher were dead. 11 other children were hurt and 2 women were injured. Some of them had very severe injuries. It was only in the evening when all of them were out of danger.

After that bloodbath the man took his bike and rode away to the next city Lebbeke.

"Just doing my job", says hero pilot Chesley Sullenberger

A hero story made in America

By Oguzhan Dikici 10B

Chesley Sullenberger (57), the pilot, whose airbus safely splash landed on the Hudson river without a passenger seriously injured, has become an international hero and the favourite star of the mass media worldwide.

The plane of the US Airways started from the New York Airport "La Guardia" before the accident happened. The plane was on its way to the State of North Carolina when several big birds, presumably wild geese, got into the engines. The pilot reported problems via broadcast, but the contact broke off. After the emergency landing the plane sank into the cold water of the Hudson River (4 centigrade) up to the windows. Dramatic scenes took place. Some people climbed on the top of the plane and some on the wings and others slid into the ice cold water. Most people, one of them was a pregnant woman, reached a lifeboat in time.

The aircraft was 10 years old. On Friday Airbus didn't give any statements about rea-

sons or causes of the accident.

Chesley Sullenberger, who landed the plane safely, is an air security expert. He had trained hundreds of colleagues in security courses. In addition, he is a counsellor for security questions and he has a total of 40 years of flight experience. Before he works for US Airways he makes an apprenticeship as a pilot by the American Air Force. Since 29 years works "Sully" which the colleagues of him called, for the US Airways.

After the accident has happened Chesley called his wife and told her about the tragedy that happened. She was shocked and afraid about the incident and she was happy that her husband and the passengers survived.

Chesley Sullenberger said that he just did his job and he understood it as normal to protect the lives of his passengers. In his Hometown Denville he got the key for the city. About 3000 fans and neighbours holding flags and banners with his name and celebrate his arrival. Everyone is proud of him, because of his georgius behavior.

Pilot Chesley Sullenberger with his wife Lorriet.

5 reasons why you should laugh

By Bahar Akkoyun, 10D Sandy Pietrzok, 10D

1. One minute laughing its like 10 minutes jogging or 45 minutes meditation
2. Laughing reduces stress
3. A laugh makes you more attractive
4. Laughing increases your concentration
5. Laughing brings people

together - When was the last time you laughed? So long ago? Try it:

Why can't a woman be beautiful and clever together? Because then she would be a man.

Whats the definition of a pessimist? A pessimist is a well-informed optimist.
